

Lab 2 Report

Name 童柏鈞

Student ID 111589027

Date 2023/3/19

1 Test Plan

1.1 Test requirements

The Lab 2 requires to (1) select 15 methods from 6 classes of the SUT (GeoProject), (2) design Unit test cases by using **input space partitioning (ISP)** technique for the selected methods, (3) develop test scripts to implement the test cases, (4) execute the test scripts on the selected methods, (5) report the test results, and (6) specify your experiences of designing test cases systematically using the ISP technique.

In particular, based on the statement coverage criterion, the **test requirements** for Lab 2 are to design test cases *with **ISP*** for each selected method so that “*each statement of the method will be covered by at least one test case and the minimum statement coverage is 70% (greater than Lab 1)*”.

1.2 Test Strategy

To satisfy the test requirements listed in Section 1, a proposed strategy is to

- (1) select **those 11 methods that were chosen in Lab1** and **5 new methods** that are NOT selected previously. If possible, some of the methods do NOT have primitive types of input or output parameters (if possible).
- (2) set the objective of the minimum statement coverage to be greater than that of Lab 1 and adjust the test objective based on the time available (if necessary).
- (3) design the test cases for those selected methods by using the **input space partitioning (ISP)** technique.

1.3 Test activities

To implement the proposed strategy, the following activities are planned to perform.

No.	Activity Name	Plan hours	Schedule Date
1	Study GeoProject	1	2023/3/19
2	Learn ISP and JUnit	3	2023/3/20
3	Design test cases for the selected methods	3	2023/3/21
4	Implement test cases	3	2023/3/22

5	Perform tests	1	2023/3/23
6	Complete Lab2 report	1	2023/3/24

1.4 Design Approach

The **ISP** technique will be used to design the test cases. Specifically, the possible partitions and boundary values of input parameters shall be identified first using the **Mine Map** and **domain knowledge** (if applicable). The possible **valid combinations of the partitions** (i.e., **all combination coverage**) as well as the boundary values shall be computed for the input parameters of each selected method. Each of the partition combination can be a possible test case. *Add more test cases by considering the possible values and boundary of the outputs for the methods or by using test experiences.*

1.5 Success criteria

All test cases designed for the selected methods must pass (or **90% of all test cases must pass**) and the statement coverage should have achieved at least 70%.

2 Test Design

To fulfill the test requirements listed in section 1.1, the following methods are selected and corresponding test cases are designed.

N o.	Class	Method	Test Objective	Inputs	Expected Outputs
1	GeoHash	adjacentHash(String hash, Direction direction, int steps)		"29jw", T, 0,	"29jw"
2	GeoHash	neighbors(String hash)		"29jw"	["29jq", "29jy", "29jx", "29jt", "29jr", "29jm", "29jz", "29jv"]
3	GeoHash	bottom(String hash)		"29jw"	"29jt"
4	GeoHash	top(String hash)		"29jw"	"29jx"
5	GeoHash	heightDegrees(int n)		0	180
6	GeoHash	widhtDegrees(int n)		15	1.3096723705530167E-9
7	GeoHash	gridAsString(String hash, int fromRight, int fromBottom, int toRight, int toBottom, Set<String>		"29jw", 1, 1, 1, 1, ""	"29jv \n"

		highlightThese)			
8	GeoHash	coverBoundingBoxL ons(double topLeftLat, double topLeftLon, double bottomRightLat, double bottomRightLon, int length)		0,1,1,0,1	"topLeftLat must be >= bottomRighLat"
9	GeoHash	encodeHash(doubl e latitude, double longitude, int length)		1,1,1	"s"
10	Base32	encodeBase32(long i, int length)		75324,4	"29jw"
11	Base32	encodeBase32(long i)		75324	"0000000029jw "
12	Base32	decodeBase32(String hash)		"-29jw"	-75324
13	Base32	getCharIndex(char ch)		'0'	0
14	Coverage	getRatio()		1.0	1.0
15	LatLong	add(double deltaLat, double deltaLon)		1,1	lat+1,lon+1

The details of the design are given below:

The Excel file of test cases...

3 Test Implementation

The design of test cases specified in Section 2 was implemented using JUnit 4. The test scripts of 3 selected test cases are given below. The rest of the test script implementations can be found in the [link](#) (or JUnit files).

N o.	Test method	Source code
---------	-------------	-------------

1	adjacentHash(String hash, Direction direction, int steps)	<pre> @Test public void adjacentHash() { //無負號 String str_adjhash = GeoHash.adjacentHash(hash: "29jw", assertEquals(expected: "29jt", str_adjhash); str_adjhash = GeoHash.adjacentHash(hash: "29jw", Direction assertEquals(expected: "29jw", str_adjhash); str_adjhash = GeoHash.adjacentHash(hash: "29jw", Direction assertEquals(expected: "29jx", str_adjhash); str_adjhash = GeoHash.adjacentHash(hash: "29jw", Direction assertEquals(expected: "29jx", str_adjhash); str_adjhash = GeoHash.adjacentHash(hash: "29jw", Direction assertEquals(expected: "29jw", str_adjhash); str_adjhash = GeoHash.adjacentHash(hash: "29jw", Direction assertEquals(expected: "29jt", str_adjhash); str_adjhash = GeoHash.adjacentHash(hash: "29jw", Direction </pre>
2	encodeBase32(long i, int length)	<pre> @Test public void encodeBase32() throws Exception { String encode = Base32.encodeBase32(i: 75324, length assertEquals(expected: "29jw", encode); encode = Base32.encodeBase32(i: -75324, length assertEquals(expected: "-29jw", encode); encode = Base32.encodeBase32(i: 75324, length assertEquals(expected: "0000029jw", encode); encode = Base32.encodeBase32(i: -75324, length assertEquals(expected: "-0000029jw", encode); encode = Base32.encodeBase32(i: 10); assertEquals(expected: "00000000000b", encode); </pre> <p>...</p>
3	getRatio()	...

		<pre>@Test public void getRatio() { Set<String> hash = Collections.singleton("29jw"); double ratio = 1.0; Coverage coverage = new Coverage(hash,ratio); double ans = coverage.getRatio(); assertEquals(Double.doubleToLongBits(ratio),Double hash = Collections.singleton("29jw"); ratio = 0.0; coverage = new Coverage(hash,ratio); ans = coverage.getRatio(); assertEquals(Double.doubleToLongBits(ratio),Double hash = Collections.singleton("29jw"); ratio = -1.0; coverage = new Coverage(hash,ratio); ans = coverage.getRatio();</pre>

5 Summary

In Lab 2, **15** test cases have been designed and implemented using JUnit and the ISP technique. The test is conducted in **3** CI and the execution results of the 15 test methods are **all passed**. The total statement coverage of the test is **74%**. Thus, the test requirements described in Section 1 are satisfied.
